SUBIACO CENTRO APARTMENTS
WIN ACCOLADES AT HIA

PERTH – OCTOBER 2002 – A BGC constructed unit development in Brigid Road Subiaco came under the spotlight recently with the Housing Industry Association Awards announcements.

Winner in the Medium Density Project of the Year, with six dwellings or more, priced at \$150,000 or over, the development is comprised of six apartments, each luxuriously appointed with designer fixtures and featuring classic, clean lines with jarrah highlights. It also won the "The Perth Medium Density Project of the Year " and "The Western Australian Medium Density Project of the Year " and therefore automatically will be entered into the national awards held in Cairns next year

According to Wayne Forde, Manager BGC Unit Development, the award recognised the attention to detail in both the design and construction.

“These factors, coupled with the use of a mixture of building materials – glass, wood, steel – caught the judges eye. The award is a credit to all involved,” he said.

Each apartment features vitreous floor tiles, stone bench and vanity tops and stainless steel cooking appliances. A feeling of spaciousness is reinforced by either large courtyards or balconies, with access through floor to ceiling glazed doors.

A two lane pool sits on the second storey sundeck, adjoined by heated spa. The pool also features a six metre by 60 centimetre subaquatic window which looks out onto the street. A fully equipped gymnasium and entertainment terrace provide residents with an al fresco lounging or dining area.

Additional features include ducted reverse cycle air conditioning, a built in clothes dryer and a storeroom.
